**Hypothesis**

**Materials**

**Procedure**

**Data/Charts/Graphs/Pictures/Illustrations**

**Project Title**

**By: _____**

**Results**

**Conclusion**

**Next Questions**
SCIENCE FAIR POSTER CHECKLIST

☐ Title
☐ Name
☐ Investigation question
☐ Hypothesis
☐ Background Knowledge/What I Already Know
☐ Materials
☐ Procedure
☐ Data (tables and/or graphs)
☐ Results (written in sentences)
☐ Conclusion
☐ Next questions
☐ Pictures and/or illustrations
Write the title of your experiment and your name
Example:

Sink or Float
By Meagan B.
QUESTION: Write a question that can be scientifically investigated.
HYPOTHESIS: Write a hypothesis that predicts the answer to the question.
BACKGROUND KNOWLEDGE/WHAT I ALREADY KNOW: Write what you already know about your topic. Include any information you learned by researching your topic.
MATERIALS: Write the materials needed for your scientific investigation. List specific amounts of each item.
MATERIALS: Write and draw the materials needed for your scientific investigation.
PROCEDURE

1. __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________

2. __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________

3. __________________________________________________________________________
   __________________________________________________________________________
   __________________________________________________________________________
Write a step by step logical plan for your scientific investigation. Use enough detail so that someone could recreate your experiment.
Write a step by step logical plan for your scientific investigation. Use enough detail so that someone could recreate your experiment.
Write a step by step logical plan for your scientific investigation. Use enough detail so that someone could recreate your experiment.

</tbody>
</table>
RESULTS: Use your data to explain your results.
CONCLUSION: State your conclusion(s) and how it relates to your questions or hypothesis. Was your hypothesis correct? Why or why not?
WHAT I LEARNED: What did this experiment teach you?
NEXT QUESTIONS: What do you wonder based on your results and conclusion? What could you do for a follow up experiment?
